

Brandon Leavitt

Seattle, WA | bleavitt23@icloud.com | 206-247-2064 | [Portfolio](#)

Education

University of Washington, Seattle

Expected June 2028

B.S. Electrical and Computer Engineering

Cumulative GPA: 3.56

Relevant Coursework: Fundamentals of Electrical Engineering, Computer Hardware Skills, Introduction to Computer Programming I–III, Digital Circuits and Systems, Programming for Signal & Information Processing, Advanced Technical Communication, Linear Algebra, Differential Equations.

Work

Raising Canes, Seattle WA

March 2026 - Present

Crew Member

Operated POS system to process payments, discounts, refunds, and gift cards accurately. Maintained performance and efficiency during high traffic conditions, ensuring quality and customer service. Worked with crewmembers to coordinate tasks and resolve relevant problems. Remained flexible and decisive during problems, adapting quickly and taking proper steps to implement effective solutions.

Quality Food Center, Mercer Island WA

July 2023 - April 2024

Front End Clerk

Optimized workflow by packing and organizing items quickly and efficiently. Had clear and professional communication with others in a fast-paced environment helping customers and coworkers. Resolved customer concerns quickly and effectively. Worked with others to complete tasks, problems, and timing.

Extracurricular

Line Following Robot

January 2026 - March 2026

EE 201, University of Washington

Worked on a team of three to design and build an autonomous robot that follows a track by using light sensors to compare line color against surroundings to keep itself centered. Prototyped the sensor and motor circuit on a breadboard, then designed and had printed a custom PCB. Designed and 3D printed robot chassis.

Boring Club, University of Washington

September 2025 - December 2025

High Frequency Trading

Participated in a project that used Python to develop a high frequency trading system. Learned how hardware and software connect in latency-sensitive systems and learned the basics of using GitHub while working with group members.

Personal Project

July 2024 - August 2024

Helical Antenna Project

Constructed a helical antenna to receive radio station signals and NOAA satellite data. Learned principles of radio communication and signal analysis to decode radio signals into usable data my computer could utilize.

Skills

Languages: Java, Python, Verilog.

Hardware: Arduino, FPGA (basic), digital logic design.

Electrical and Hardware: Circuit analysis, Linear systems, introductory Signals and Processing

Design Tools: KiCad, Autodesk Fusion 360, LTspice, and Quartus.
